CLAIMS

What is claimed is:

- 1. An ice axe device, comprising:
 - a) an elongated shaft with opposite proximal and distal ends;
 - b) a pick, disposed at the distal end of the elongated shaft;
 - c) a grip, disposed at the proximal end of the elongated shaft; and
- d) a pommel, adjustably securable to a proximal end of the grip, movable towards and away from the grip to respectively shorten and lengthen a length of the grip.

- 2. A device in accordance with claim 1, further comprising:
- at least one spacer, selectively disposable on the grip, to selectively lengthen the length of the grip.
- 3. A device in accordance with claim 2, wherein the at least one spacer is selectively disposable between the grip and the pommel.
 - 4. A device in accordance with claim 2, further comprising:
 - a protrusion, formed on the proximal end of the grip, to receive the at least one spacer thereon; and
 - a bore, extending through the at least one spacer to receive the protrusion of the grip therethrough.
- 5. A device in accordance with claim 1, wherein the grip is a primary grip, and further comprising:
 - a secondary grip, disposed at the proximal end of the elongated shaft between the proximal end of the shaft and the primary grip; and

the primary grip being off-set from the secondary grip.

- 30 6. A device in accordance with claim 5, further comprising:
 - an attachment arm, extending rearwardly from the proximal end of the secondary grip to a distal end of the primary grip.

- 7. A device in accordance with claim 1, further comprising:
 - a cavity, formed in the pommel;
- a protrusion, formed on the proximal end of the grip and extendable into the cavity of the pommel; and

means for securing the protrusion in the cavity.

8. An ice axe device, comprising:

- a) an elongated shaft with opposite proximal and distal ends;
- b) a pick, disposed at the distal end of the elongated shaft;
- c) a secondary grip, disposed at the proximal end of the elongated shaft;
- d) a primary grip, disposed at a proximal end of the secondary grip; and
- e) a pommel, adjustably securable to a proximal end of the primary grip, movable towards and away from the primary grip to respectively shorten and lengthen a length of the primary grip.

9. A device in accordance with claim 8, further comprising:

at least one spacer, selectively disposable on the primary grip, to selectively lengthen the length of the primary grip.

- 20 10. A device in accordance with claim 9, wherein the at least one spacer is selectively disposable between the primary grip and the pommel.
 - 11. A device in accordance with claim 9, further comprising:
 - a protrusion, formed on the proximal end of the primary grip, to receive the at least one spacer thereon; and
 - a bore, extending through the at least one spacer to receive the protrusion of the primary grip therethrough.
- 12. A device in accordance with claim 8, wherein the primary and secondary grips are off-set from one another.
 - 13. A device in accordance with claim 8, further comprising: a cavity, formed in the pommel;
